Candidate ID	DA25S56115696
Candidate Name	BLESSEN JOEL GORINKALA
Test Center Name	iON Digital Zone iDZ Kanuru Village
Test Date	15/02/2025
Test Time	9:30 AM - 12:30 PM
Subject	DA Data Science and Artificial Intelligence

Section : **General Aptitude**

Q.1 Weight of a person can be expressed as a function of their age. The function usually varies from person to person. Suppose this function is identical for two brothers, and it monotonically increases till the age of 50 years and then it monotonically decreases. Let a_1 and a_2 (in years) denote the ages of the brothers and $a_1 < a_2$.

Which one of the following statements is correct about their age on the day when they attain the same weight?

Options

- A. $a_1 < 50 < a_2$
- B. $a_1 < a_2 < 50$
- C. $50 < a_1 < a_2$
- D. Either $a_1 = 50$ or $a_2 = 50$

Chosen Option : A

Q.6 Column-I has statements made by Shanthala; and, Column-II has responses given by Kanishk.

Column-I		Column-II	
P.	This house is in a mess.	1.	Alright, I won't bring it up during our conversations.
Q.	I am not happy with the marks given to me.	2.	Well, you can easily look it up.
R.	Politics is a subject I avoid talking about.	3.	No problem, let me clear it up for you.
S.	I don't know what this word means.	4.	Don't worry, I will take it up with your teacher.

Identify the option that has the correct match between Column-I and Column-II.

- Options
- A. P – 3; Q – 4; R – 1; S – 2
 - B. P – 4; Q – 1; R – 2; S – 3
 - C. P – 2; Q – 3; R – 1; S – 4
 - D. P – 1; Q – 2; R – 4; S – 3

Q.5 Consider the following three relations:

Car (model, year, serial, color)

Make (maker, model)

Own (owner, serial)

A tuple in Car represents a specific car of a given model, made in a given year, with a serial number and a color. A tuple in Make specifies that a maker company makes cars of a certain model. A tuple in Own specifies that an owner owns the car with a given serial number. Keys are underlined; (owner, serial) together form key for Own. (\bowtie denotes natural join)

$$\pi_{\text{owner}}(\text{Own} \bowtie (\sigma_{\text{color}=\text{"red"}}(\text{Car} \bowtie (\sigma_{\text{maker}=\text{"ABC"}}\text{Make}))))$$

Which one of the following options describes what the above expression computes?

Options

- A. All red cars made by ABC
- B. All owners of a red car made by ABC
- C. All owners of more than one car, where at least one car is red and made by ABC
- D. All owners of a red car, a car made by ABC, or a red car made by ABC

Q.21 Consider designing a linear classifier

$$y = \text{sign}(f(x; w, b)), \quad f(x; w, b) = w^\top x + b$$

on a dataset $D = \{(x_1, y_1), (x_2, y_2), \dots, (x_N, y_N)\}$, $x_i \in \mathbb{R}^d$, $y_i \in \{+1, -1\}$, $i = 1, 2, \dots, N$. Recall that the sign function outputs +1 if the argument is positive, and -1 if the argument is non-positive. The parameters w and b are updated as per the following training algorithm:

$$w_{\text{new}} = w_{\text{old}} + y_n x_n, \quad b_{\text{new}} = b_{\text{old}} + y_n$$

whenever $\text{sign}(f(x_n; w_{\text{old}}, b_{\text{old}})) \neq y_n$. In other words, whenever the classifier wrongly predicts a sample (x_n, y_n) from the dataset, w_{old} gets updated to w_{new} , and likewise b_{old} gets updated to b_{new} . Consider the case $(x_n, +1)$, $f(x_n; w_{\text{old}}, b_{\text{old}}) < 0$. Then

- Options
- A. $f(x_n; w_{\text{new}}, b_{\text{new}}) = f(x_n; w_{\text{old}}, b_{\text{old}})$
 - B. $f(x_n; w_{\text{new}}, b_{\text{new}}) < f(x_n; w_{\text{old}}, b_{\text{old}})$
 - C. $f(x_n; w_{\text{new}}, b_{\text{new}}) > f(x_n; w_{\text{old}}, b_{\text{old}})$
 - D. $y_n f(x_n; w_{\text{old}}, b_{\text{old}}) > 1$

Q.33 Let $\{x_1, x_2, \dots, x_n\}$ be a set of linearly independent vectors in \mathbb{R}^n . Let the (i, j) -th element of matrix $A \in \mathbb{R}^{n \times n}$ be given by $A_{ij} = x_i^\top x_j$, $1 \leq i, j \leq n$. Which one of the following statements is correct?

- Options A. $z^\top A z = 0$ for some non-zero $z \in \mathbb{R}^n$
 B. A is invertible
 C. 0 is a singular value of A
 D. Determinant of A is 0

Q.34 Consider a fact table in an OLAP application: $\text{Facts}(D1, D2, \text{val})$, where $D1$ and $D2$ are its dimension attributes and val is a dependent attribute. Suppose attribute $D1$ takes 3 values and $D2$ takes 2 values, and all combinations of these values are present in the table Facts . How many tuples are there in the result of the following query?

```
SELECT D1, D2, sum(val)
FROM Facts
GROUP BY CUBE (D1, D2);
```

Options A. 12

B. 6

C. 1

D. 9

Q.35 Consider a two-class problem in \mathbb{R}^d with class labels *red* and *green*. Let μ_{red} and μ_{green} be the means of the two classes. Given test sample $x \in \mathbb{R}^d$, a classifier calculates the squared Euclidean distance (denoted by $\|\cdot\|^2$) between x and the means of the two classes and assigns the class label that the sample x is closest to. That is, the classifier computes

$$f(x) = \|\mu_{red} - x\|^2 - \|\mu_{green} - x\|^2$$

and assigns the label *red* to x if $f(x) < 0$, and *green* otherwise. Which of the following statements is/are correct?

Options A.

The sample $x = 0$ is assigned the label *green* if $\|\mu_{red}\| < \|\mu_{green}\|$

B. f is a quadratic polynomial in x

C.

$f(x) = w^T x + b$, where w and b are functions of μ_{red} and μ_{green}

D. f is a linear function of x

Q.38 Consider the neural network shown in the figure with

inputs: u, v

weights: a, b, c, d, e, f

output: y

R denotes the ReLU function, $R(x) = \max(0, x)$.

Given $u = 2, v = 3$,

$a = 1, b = 1, c = 1, d = -1, e = 4, f = -1$,

which one of the following is correct?

Options

A. $\frac{\partial y}{\partial a} = 1, \frac{\partial y}{\partial f} = 0$

B. $\frac{\partial y}{\partial a} = 2, \frac{\partial y}{\partial f} = -1$

C. $\frac{\partial y}{\partial a} = 1, \frac{\partial y}{\partial f} = -1$

D. $\frac{\partial y}{\partial a} = 8, \frac{\partial y}{\partial f} = 0$
